This involved changing the configuration on one or more of the devices. You will be presented with a series of trouble tickets related to issues introduced during these configurations.**Note:** Although trouble tickets have many similar fault indications, each ticket has its own issue and solution.Each ticket has 3 sub questions that need to be answered & topology remains same.**Question-1** Fault is found on which device,**Question-2** Fault condition is related to,**Question-3** What exact problem is seen & what needs to be done for solution**Client is unable to ping IP 209.65.200.241****Solution**Steps need to follow as below:-**\* When we check on client 1 & Client 2 desktop we are not receiving DHCP address from R4 ipconfig ----- Client will be getting 169.X.X.X\* On ASW1 port Fa1/0/ 1 & Fa1/0/2 access port VLAN 10 was assigned but when we checked interface it was showing down Sh run ----- check for running config of int fa1/0/1 & fa1/0/2 (switchport access Vlan 10 will be there with switch port security command). Now check as below Sh int fa1/0/1 & sh int fa1/0/2\* As seen on interface the port is in err-disable mode so need to clear port.\* Change required: On ASW1, we need to remove port-security under interface fa1/0/1 & fa1/0/2.**
