NEW QUESTION: 1A. Option B B. Option D C. Option A D. Option C **Answer: A** Explanation: Partitions represent a collection of entities with the same PartitionKey values. Partitions are always served from one partition server and each partition server can serve one or more partitions. A partition server has a rate limit of the number of entities it can serve from one partition over time. References: <https://docs.microsoft.com/en-us/rest/api/storageservices/Designing-a-Scalable-Partitioning-Strategy-for-Azure-Table-Storage?redirectedfrom=MSDN>

NEW QUESTION: 2 Which of the following technical controls is BEST used to define which applications a user can install and run on a company issued mobile device? A. Blacklisting B. Whitelisting C. Authentication D. Acceptable use policy **Answer: B** Explanation: White lists are closely related to ACLs and essentially, a white list is a list of items that are allowed.

NEW QUESTION: 3 Which statement is true about security rules for Database Deployments? A. They define a specific communication path, which consists of a source, destination, and protocol-port combination over which communication is allowed. B. They are used to encrypt communication between Database Deployments. C. They are used only for configuring external server access to Database Deployments and do not impact how network groups communicate. D. They are used to map an external user to a database user to allow the user to communicate with and access the database. **Answer: A** Explanation: Explanation/Reference: Explanation: On the Access Rule you can define the following: Source Hosts from which traffic is allowed. Possible values are DB, PUBLIC-INTERNET, or a custom value in the form of an IP address. Destination Security list to which traffic is allowed. This will be DB, the ora_db security list for the deployment. Ports Port or range of ports for the rule. References: <https://docs.oracle.com/en/cloud/paas/database-dbaas-cloud/csdbi/service-console-access-rules-page.html>
