NEW QUESTION: 1How should the stated service-oriented Integration architecture principles be applied at an organization?**A.** The architecture principles define what products will be used in the architecture, so the architecture principles must be adjusted to reflect the chosen products.**B.** The organization should review and evaluate the architecture principles, and then derive their own architecture principles that match their specific environment and goals.**C.** An organization can add additional architecture principles, but the stated architecture principles must be followed.**D.** An organization can decide to not enforce one or more of the architecture principles, but additional architecture principles will not be needed.**E.** All of the architecture principles must be followed. If any of the principles are violated, the architecture is not service oriented.**Answer: B**

NEW QUESTION: 2Which new hire data is use for the first rehire check in the ONB2.0process?**A.** Data captured during the Personal Data Collection/Paperwork step**B.** Data from the Applicant Tracking System**C.** Data from the onboarding tasks.**D.** Data captured during the Review New Hire Data step.**Answer: B**

NEW QUESTION: 3

次のIPアドレスを選ぶダイナミックなNATプールと港からでなく、どの特徴が、使い古したIPアドレスの上で許します？**A.** ダイナミックPAT回転**B.** ダイナミック回転**C.** 次のIP**D.** ラウンドロビン

Answer: DExplanation:ExplanationThe round-robin keyword enables round-robin address allocation for a PAT pool. Without round robin, by default all ports for a PAT address will be allocated before the next PAT address is used. The round-robin method assigns an address/port from each PAT address in the pool before returning to use the first address again, and then the second address, and so on.Source:
