**NEW QUESTION: 1** A user has attached an EBS volume to a running Linux instance as a "/dev/sdf" device. The user is unable to see the attached device when he runs the command "df -h". What is the possible reason for this?**A.** The volume is not in the same AZ of the instance**B.** The volume is not formatted**C.** The volume is not mounted**D.** The volume is not attached as a root device**Answer: C****Explanation:**When a user creates an EBS volume and attaches it as a device, it is required to mount the device. If the device/volume is not mounted it will not be available in the listing.**Reference:**  
<http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/AmazonEBS.html>

**NEW QUESTION: 2** DRAG DROP You have a SQL Server database server that contains a database named CustomerDB. CustomerDB is protected by using transparent data encryption (TDE) and a certificate named TDE\_Cert. The server fails. You deploy a new server and restore all of the backups to a folder named C:\backups. You need to restore the database to the new server. Which three statements should you execute in sequence? To answer, move the appropriate statements from the list of statements to the answer area and arrange them in the correct order.**Answer:** **Explanation:** **Explanation:** In order to perform a successful restore, we'll need the database master key in the master database in place and we'll need to restore the certificate used to encrypt the database, but we'll need to make sure we restore it with the private key. In checklist form: There's a database master key in the master database. The certificate used to encrypt the database is restored along with its private key. The database is restored.**Step 1:** CREATE MASTER KEY ENCRYPTION BY PASSWORD- 'My Password'**Step 2:** Create CERTIFICATE FROM FILE DECRYPTION BY PASSWORD**Step 3:** RESTORE DATABASE ..**References:**

**NEW QUESTION: 3** You need to deploy App1. How should you install App1?**A.** on a Client Hyper-V virtual machine**B.** as a RemoteApp program**C.** as a Microsoft Application Virtualization (App-V) package**D.** locally**Answer: B****Explanation:** Topic 3, Litware, Inc. Case Study Overview  
**General Overview** Litware, Inc. is an international manufacturing company that has 1,500 employees. Litware has a main office and a branch office. The main office is located in Montreal. The branch office is located in Seattle. The offices connect to each other by using a WAN link.  
**Network Configuration** The environment contains a production network and a development network. The two networks are isolated from one another. The networks use the addressing schemes shown in the following table.  
**Router interfaces** are assigned the first IP address on each subnet.  
**Existing Environment** Active Directory The network contains two Active Directory forests named litware.com and dev.litware.com. Each forest contains a single domain. The functional level of both forests is Windows Server 2012 R2.  
**Management Infrastructure** Litware has a deployment of Microsoft System Center 2012 R2 Configuration Manager. On the

production network in the Montreal office, Configuration Manager agents are installed on the client computers that run Windows 8.1 Enterprise. Configuration Manager is used only to deploy Windows updates. Operating systems are deployed either manually or by using Windows Deployment Services (WDS). Configuration Manager servers and WDS servers have the Microsoft Deployment Toolkit (MDT) 2013 installed. Configuration Manager and MDT are integrated. Windows Server and Client Environment

The network contains servers that run Windows Server 2012 R2. The network contains the client computers configured as shown in the following table. The relevant servers in the production network are configured as shown in the following table. The relevant computers on the development network are configured as shown in the following table.

**Problem Statements**

Litware identifies the following issues on the networks:

- IT administrators report that operating system deployment and license tracking of Windows 8.1 Enterprise are too labor intensive.
- Certain internally developed applications have compatibility issues with Windows 8.1 Enterprise.

**CustomSettings.ini**

CustomSettings.ini on Server201 and Server301 will contain the following information:

- Requirements**
- Business Goals**

As much as possible, Litware plans to minimize the costs associated with purchasing hardware and software.

- Planned Changes**

Litware plans to implement the following changes to the networks:

- On the production network, implement a Key Management Service (KMS).
- Deploy a Configuration Manager agent to all of the production network computers.
- On the production network, implement a Zero Touch deployment of Windows 8.1 Enterprise.
- On the production network, deploy Windows 8.1 Enterprise to all of the client computers that run Windows 7 Enterprise.
- On the development network, implement a Lite Touch deployment of Windows 7 Enterprise and Windows 8.1 Enterprise.

**General Requirements**

Litware identifies the following general requirements:

- Images deployed by using Configuration Manager and WDS must include Windows updates that are deployed already to the client computers.
- The installation of Microsoft Office 2013 on the production and development networks must include Outlook, Word, and Excel only.
- The deployed operating system must take full advantage of the hardware platform to which it is deployed.
- Network traffic to the Internet and WAN traffic between the offices must be minimized, whenever possible.
- Administrative effort must be minimized, whenever possible.

**Production Technical Requirements**

Litware identifies the following technical requirements for the planned deployments to the production network:

- Operating system deployments must include the latest Windows updates.
- All SQL Server instances must be Standard edition or Enterprise edition.
- Images copied between distribution points must NOT use any network bandwidth.
- The Microsoft Assessment and Planning (MAP) Toolkit must be used for all assessments of the client computers.
- Operating system deployments to the production network computers must use Configuration Manager integrated with MDT.
- Office 2013 must be deployed to the production network computers by using Microsoft Application Visualization (App-V).
- Server1 and Server101 must be used for operating system deployments and Windows update deployments to the production network computers.
- All Configuration Manager operating system deployment task sequences must be capable of using the settings configured in Customsettings.ini.
- The capture of reference images on the Configuration Manager servers must be implemented by using the build and capture a reference operating system image task sequence.

**Development Technical Requirements**

Litware identifies the following technical requirements for the planned deployments to the development network:

- When reinstalling computers on the development network, the user state of the administrator account and the local accounts must not be captured. The user state of all other accounts must be captured.
- Application compatibility issues of internally developed applications must be identified by monitoring the execution of each application on the Windows 8.1 Enterprise computers.
- Server201 and Server301 must be used for operating system deployments to the development network computers by using WDS integrated with MDT.
- All new systems on the development network must run Windows 7 Enterprise x86/x64 or Windows 8.1 Enterprise x86/x64.
- Office 2013 must be deployed to the development network by using Windows Installer (MSI) package-based installations.
- All computers deployed to the development network must be periodically reinstalled.

**NEW QUESTION: 4**Select and Place:**Answer:** Explanation:Explanation/Reference:
