Free 2V0-41.24 Demo Download ExamsLead offers free demo for 2V0-41.24 exam, Never have we heard complaint from our old customers.

**NEW QUESTION: 1**Your network contains an Active Directory domain named contoso.com. The domain contains a main office and a branch office. An Active Directory site exists for each office. All domain controllers run Windows Server 2012 R2. The domain contains two domain controllers. The domain controllers are configured as shown in the following table. DC1 hosts an Active Directory-integrated zone for contoso.com. You add the DNS Server server role to DC2. You discover that the contoso.com DNS zone fails to replicate to DC2. You verify that the domain, schema, and configuration naming contexts replicate from DC1 to DC2. You need to ensure that DC2 replicates the contoso.com zone by using Active Directory replication. Which tool should you use?  
**A.** Active Directory Sites and Services  
**B.** Active Directory Domains and Trusts  
**C.** Ntdsutil  
**D.** DNS Manager  
**Answer: A**  
**Explanation:** A. To control replication between two sites, you can use the Active Directory Sites and Services snap-in to configure settings on the site link object to which the sites are added. By configuring settings on a site link, you can control when replication occurs between two or more sites, and how often  
**Incorrect:** Not B. Ntdsutil.exe is a command-line tool that provides management facilities for Active Directory Domain Services (AD DS) and Active Directory Lightweight Directory Services (AD LDS). You can use the ntdsutil commands to perform database maintenance of ADDS, manage and control single master operations, and remove metadata left behind by domain controllers that were removed from the network without being properly uninstalled. Not C. DNS Manager is the tool you'll use to manage local and remote DNS Servers. Not D. Active Directory Domains and Trusts is the Microsoft Management Console (MMC) snap-in that you can use to administer domain trusts, domain and forest functional levels, and user principal name (UPN) suffixes.  
**NOTE:** If you see question about AD Replication, First preference is AD sites and services, then Repadmin and then DNSLINT.

**NEW QUESTION: 2****DRAG DROP**You have an Azure Virtual Network named fabVNet with three subnets named Subnet-1, Subnet-2 and Subnet-3. You have a virtual machine (VM) named fabVM running in the fabProd service. You need to modify fabVM to be deployed into Subnet-3. You want to achieve this goal by using the least amount of time and while causing the least amount of disruption to the existing deployment. What should you do? To answer, drag the appropriate Power Shell cmdlet to the correct location in the Power Shell command. Each

cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.**Answer:** Explanation:

**NEW QUESTION: 3**You have the following code:You need to retrieve all of the numbers from the items variable that are greater than 80. Which code should you use?**A.** Option B**B.** Option D**C.** Option A**D.** Option C**Answer: C**
