NEW QUESTION: 1 Who among the following can directly approve changes recommended in the project?
A. Senior Management: The Scrum Guidance Body usually defines a process for approving and managing changes throughout the organization. In the absence of a formal process, it is recommended that small changes that do not have a significant impact on the project be directly approved by the Product Owner. The tolerance for such small changes could be defined at an organizational level or by the sponsor for a particular project. In most projects, 90% of Change Requests could be classified as small changes that should be approved by the Product Owner. So, the Product Owner plays a very important role in managing changes in a Scrum Project.

NEW QUESTION: 3 You are developing a SQL Server Integration Services (SSIS) package. The package uses a data flow task to source data from a SQL Server database for loading into a dimension table in a data warehouse. You need to create a separate data flow path for data that has been modified since it was last processed. Which data flow components should you use to identify modified data? (Each correct answer presents a complete solution. Choose all that apply.)
A. Data Conversion **B.** Multicast **C.** Aggregated **D.** Lookup **E.** Slowly Changing Dimension
Answer: B, D
Explanation: **A:** The transformation that distributes data sets to multiple outputs. The transformation that distributes data sets to multiple outputs. **C:** Lookup Transformation The transformation that looks up values in a reference table using an exact match. Note: * SQL Server Integration Services provides three different types of data flow components: sources, transformations, and destinations. Sources extract data from data stores such as tables and views in relational databases, files, and Analysis Services databases. Transformations modify, summarize, and clean data. Destinations load data into data stores or create in-memory datasets. **Incorrect: Not B:** Data Conversion Transformation The transformation that converts

the data type of a column to a different data type. Not D: Slowly Changing Dimension Transformation The transformation that configures the updating of a slowly changing dimension. Not E: The Aggregate transformation applies aggregate functions, such as Average, to column values and copies the results to the transformation output. Besides aggregate functions, the transformation provides the GROUP BY clause, which you can use to specify groups to aggregate across.
