If you have chosen our products, you can begin your journey now, No matter which method you choose, as long as you ask for NSE7\_EFW-7.2 learning materials, we guarantee that we will reply to you as quickly as possible.

**NEW QUESTION: 1**A user has created a VPC with public and private subnets. The VPC has CIDR 20.0.0.0/16. The private subnet uses CIDR 20.0.1.0/24 and the public subnet uses CIDR 20.0.0.0/24. The user is planning to host a web server in the public subnet (port 80) and a DB server in the private subnet (port 3306). The user is configuring a security group of the NAT instance. Which of the below mentioned entries is not required in NAT's security group for the database servers to connect to the Internet for software updates ?**A.** For Outbound allow Destination: 0.0.0.0/0 on port 80**B.** For Outbound allow Destination: 0.0.0.0/0 on port 443**C.** For Inbound allow Source: 20.0.1.0/24 on port 80**D.** For Inbound allow Source: 20.0.0.0/24 on port 80**Answer: D****Explanation:**A user can create a subnet with VPC and launch instances inside that subnet. If the user has created a public private subnet to host the web server and DB server respectively, the user should configure that the instances in the private subnet can connect to the internet using the NAT instances. The user should first configure that NAT can receive traffic on ports 80 and 443 from the private subnet. Thus, allow ports 80 and 443 in Inbound for the private subnet 20.0.1.0/24. Now to route this traffic to the internet configure ports 80 and 443 in Outbound with destination 0.0.0.0/0. The NAT should not have an entry for the public subnet CIDR. **NEW QUESTION: 2**For label switched packets that contain the same source and destination address and are transmitted via the same interface, the label switch path **0A.** May be the same. **B.** Must be different. **C.** Must be the same. **Answer: C**

**NEW QUESTION: 3**Under which two circumstances is a directory backup performed?**A.** A directory was not previously backed up. **B.** If DIRMC is specified in the client options file. **C.** Only for selective backup. **D.** Directory permissions changes. **E.** If any file within the directory has changed. **Answer: A,E**

**NEW QUESTION: 4**Your network contains a server named Server1 that runs Windows Server 2008 R2 Standard. Server1 has the Active Directory Certificate Services (AD CS) role installed. You configure a certificate template named Template1 for autoenrollment. You discover that certificates are not being issued to any client computers. The event logs on the client computers do not contain any autoenrollment errors. You need to ensure that all of the client computers automatically receive certificates based on Template1. What should you do? **A.** Restart Certificate Services on Server1. **B.** Modify the Default Domain Controllers Policy Group Policy object (GPO). **C.** Modify the Default Domain Policy Group Policy object (GPO). **D.** Upgrade

Server1 to Windows Server 2008 R2 Enterprise.**Answer: C**Explanation:Reference:  
<http://technet.microsoft.com/en-us/library/cc731522.aspx>Configure Certificate AutoenrollmentMany certificates can be distributed without the client even being aware that enrollment is taking place.These can include most types of certificates issued to computers and services, as well as many certificates issued to users.To automatically enroll clients for certificates in a domain environment, you must:-Configure a certificate template with Autoenroll permissions.-Configure an autoenrollment policy for the domain.To configure autoenrollment Group Policy for a domain1.On a domain controller running Windows Server 2008 R2 or Windows Server 2008, click Start, point to Administrative Tools, and then click Group Policy Management.2.In the console tree, double-click Group Policy Objects in the forest and domain containing the Default Domain Policy Group Policy object (GPO) that you want to edit. 3.(...)
