NEW QUESTION: 1 アプリケーションインスタンスを管理します。
アプリケーションは複数のデータベースからデータを消費します。
アプリケーションコードは、サーバー、データベース、およびテーブル名の組み合わせを使用してデータベーステーブルを参照します。
アプリケーションインスタンスをAzureに移行する必要があります。
この目標を達成するために考えられる2つの方法は何ですか？
正解はそれぞれ完全な解決策を提示します。

注：それぞれ正しい選択は1ポイントの価値があります。**A. Azure SQLデータベース****B. SQL管理対象インスタンス****C. Azure仮想マシン内のSQL Server****D. SQL**

Serverストレッチデータベース**Answer: B, D** Explanation: A: Access your SQL Server data seamlessly regardless of whether it's on-premises or stretched to the cloud. You set the policy that determines where data is stored, and SQL Server handles the data movement in the background. The entire table is always online and queryable. And, Stretch Database doesn't require any changes to existing queries or applications - the location of the data is completely transparent to the application. D: The managed instance deployment model is designed for customers looking to migrate a large number of apps from on-premises or IaaS, self-built, or ISV provided environment to fully managed PaaS cloud environment, with as low migration effort as possible. Using the fully automated Data Migration Service (DMS) in Azure, customers can lift and shift their on-premises SQL Server to a managed instance that offers compatibility with SQL Server on-premises and complete isolation of customer instances with native VNet support.
