**NEW QUESTION: 4**\*\*\***A.** Option **A****B.** Option **B****Answer: A**Explanation:Application Gateway works at the application layer (Layer 7 in the OSI network reference stack). It acts as a reverse-proxy service, terminating the client connection and forwarding requests to back-end endpoints. It supports the HTTP, HTTPS, and WebSockets protocols.Application Gateway is useful for applications that require requests from the same user/client session to reach the same back-end virtual machine. Examples of these applications would be shopping cart applications and web mail servers.Traffic Manager works at the DNS level. It uses DNS responses to direct end-user traffic to globally distributed endpoints. Clients then connect to those endpoints directly.Microsoft Azure Traffic Manager allows you to control the distribution of user traffic for service endpoints in different datacentersReferences:
