However, this is not the problem as we can see that R3 has been correctly configured to do this. It is, however, missing the network statement for the link to R4.Here, we see that the link to R4 is using the 192.168.34.0 network, but that this network has not been added to OSPFBased on the network diagram, this link should be added to Area 1, not Area 2.
