**NEW QUESTION: 1**An internal router is sending UDP keep-alive packets that are being encapsulated with GRE and sent through your R70 Security Gateway to a partner site. A rule for GRE traffic is configured for ACCEPT/LOG. Although the keep-alive packets are being sent every 1 minute, a search through the SmartView Tracker logs for GRE traffic only shows one entry for the whole day (early in the morning after a Policy install).Your partner site indicates they are successfully receiving the GRE encapsulated keep-alive packets on the 1-minute interval.If GRE encapsulation is turned off on the router, SmartView Tracker shows a log entry for the UDP keep-alive packet every minute.Which of the following is the BEST explanation for this behavior?**A.** The log unification process is using a LUUID (Log Unification Unique Identification) that has become corrupt. Because it is encrypted, the R71 Security Gateway cannot distinguish between GRE sessions. This is a known issue with the GRE. Use IPSEC instead of the non GRE protocol for encapsulation.**B.** The setting Log does not capture this level of details for GRE Set the rule tracking a action to audit since certain types of traffic can only tracked this way.**C.** The Log Server log unification process unifies all log entries from the Security Gateway on a specific connection into only one log entry in the SmartView Tracker. GRE traffic has a 10 minute session timeout, thus each keep-alive packet is considered part of the original logged connection at the beginning of the day.**D.** The Log Server is failing to log GRE traffic property because it is VPN traffic. Disable all VPN configurations to the partner site to enable proper logging.**Answer: C**
