NEW QUESTION: 4What does the flume sink do in a flume configuration?**A.** removes events from the channel and puts them into an external repository**B.** consumes events delivered to it by an external source such as a web server**C.** forwards events to the source**D.** hosts the

components through which events flow from an external source to the next destination **E**. sinks the log file that is transmitted into Hadoop **Answer: B** Explanation: A Flume source consumes events delivered to it by an external source like a web server. The external source sends events to Flume in a format that is recognized by the target Flume source. When a Flume source receives an event, it stores it into one or more channels. The channel is a passive store that keeps the event until it's consumed by a Flume sink. References: <https://flume.apache.org/FlumeUserGuide.html>
