NEW QUESTION: 1An IS auditor discovers that developers have operator access to the command line of a production environment operating system. Which of the following controls would BEST mitigate the risk of undetected and unauthorized program changes to the production environment?
A. Software development tools and compilers have been removed from the production environment
B. Access to the operating system command line is granted through an access restriction tool with preapproved rights
C. Commands typed on the command line are logged
D. Hash keys are calculated periodically for programs and matched against hash keys calculated for the most recent authorized versions of the programs
Answer: D
Explanation:The matching of hash keys over time would allow detection of changes to files. Choice A is incorrect because having a log is not a control, reviewing the log is a control. Choice C is incorrect because the access was already granted-it does not matter how. Choice D is wrong because files can be copied to and from the production environment.

NEW QUESTION: 2What is the function of the Cisco ACE service module?
A. Based on type of content, it effectively selects the site that will process the request.
B. Based on type of content, it performs effect load balancing across the serves in the data center.
C. Based on priorities, it effectively selects the server that will process the request.
D. Based on available bandwidth, it performs effect load balancing across the serves in the data center.
Answer: B
Explanation: Here, the load balancing across servers, based on the content of the data passing through the network, is handled by Cisco's ACE Service Module.

NEW QUESTION: 3**A.** WHERE event_type = 1
B. SELECT * FROM system..suspect_pages
C. SELECT * FROM msdb..suspect_pages
D. SELECT * FROM system..corrupted_pages
E. WHERE event_type = 3
F. WHERE event_type = 2
G. SELECT * FROM msdb.. corrupted_pages
Answer: C,F
Explanation:suspect_pages contains one row per page that failed with a minor 823 error or an 824 error. Pages are listed in this table because they are suspected of being bad, but they might actually be fine. When a suspect page is repaired, its status is updated in the event_type column. The suspect_pages table resides in the msdb database. SalesDb3 has pages with checksum errors. Checksum errors have the event_type value 2.
