NEW QUESTION: 1Your company is storing millions of sensitive transactions across thousands of 100-GB files that must be encrypted in transit and at rest. Analysts concurrently depend on subsets of files, which can consume up to 5 TB of space, to generate simulations that can be used to steer business decisions. You are required to design an AWS solution that can cost effectively accommodate the long-term storage and in-flight subsets of data. **A.** Use HDFS on Amazon EMR, and run simulations on subsets in ephemeral drives on Amazon EC2. **B.** Store the full data set in encrypted Amazon Elastic Block Store (EBS) volumes, and regularly capture snapshots that can be cloned to EC2 workstations. **C.** Use Amazon Simple Storage Service (S3) with server-side encryption, and run simulations on subsets in ephemeral drives on Amazon EC2. **D.** Use Amazon S3 with server-side encryption, and run simulations on subsets in-memory on Amazon EC2. **E.** Use HDFS on Amazon Elastic MapReduce (EMR), and run simulations on subsets in-memory on Amazon Elastic Compute Cloud (EC2). **Answer: E**

NEW QUESTION: 2Which of the following describes the purpose over4 tunneling? **A.** To give IPv6 traffic preferential routing over IPv4 routes. **B.** To allow core routers running only IPv6 protocols to carry IPv4 traffic. **C.** To give IPv4 only routers the ability to route based on IPv6 addresses. **D.** To allow IPv6 traffic to pass through an IPv4 network. **Answer: D**

NEW QUESTION: 3Scenario Refer to the topology. Your company has decided to connect the main office with three other remote branch offices using point-to-point serial links. You are required to troubleshoot and resolve OSPF neighbor adjacency issues between the main office and the routers located in the remote branch offices. Use appropriate show commands to troubleshoot the issues and answer all four questions. Instructions An OSPF neighbor adjacency is not formed between R3 in the main office and R5 in the Branch2 office. What is causing the problem? **A.** There is a missing network command in the OSPF process on R5. **B.** There is an OSPF hello and dead interval mismatch. **C.** There is a PPP authentication issue; a password mismatch. **D.** There is an area ID mismatch. **Answer: B** Explanation: Explanation/Reference: Explanation: Here are the relevant parts of the router configs: Continue checking their connected interfaces with the "show running-config" command: The only difference we can see here is the line "ip ospf hello-interval 50" on R3. This command sets the number of seconds R3

waits before sending the next hello packet out this interface. In this case after configuring this command, R3 will send hello packets to R5 every 50 seconds. But the default value of hello-interval is 10 seconds and R5 is using it. Therefore, we can think of a hello interval mismatch problem here. You can verify with the "show ip ospf interface <interface>" command on each router. So we can see both hello and dead interval are mismatched because the dead interval always four times the value of hello interval, unless you manually configure the dead interval (with the ip ospf dead-interval<seconds> command).

NEW QUESTION: 4 Which of the following represents the GREATEST challenge to implementing IT governance?
