**NEW QUESTION: 1**InstructionsTo what extent will the Cisco IPS sensor contribute data to the Cisco SensorBase network?**A.** It will not contribute to the SensorBase network.**B.** It will contribute to the SensorBase network, but will withhold some sensitive information**C.** It will contribute the victim IP address and port to the SensorBase network.**D.** It will not contribute to Risk Rating adjustments that use information from the SensorBase network.**Answer: B**  
Explanation:To configure network participation, follow these steps:Step 1: Log in to IDM using an account with administrator privileges.Step 2: Choose Configuration > Policies > Global Correlation > Network Participation.Step 3: To turn on network participation, click the Partial or Full radio button:\* Partial-Data is contributed to the SensorBase Network, but data considered potentially sensitive is filtered out and never sent.\* Full-All data is contributed to the SensorBase NetworkIn this case, we can see that this has been turned off as shown below:

**NEW QUESTION: 2**In which engines is an analytic view executed that contains a calculated column?(Choose two)**A.** Calculation engine**B.** Join engine**C.** OLAP engine**D.** Row store engine  
**Answer: A,C**

**NEW QUESTION: 3**Drag and drop each BGP attribute on the left into the priority order in which the attributes are preferred when determining the best path on the right.**Answer:** Explanation:

**NEW QUESTION: 4**HOTSPOTYour network contains a RADIUS server named Admin1.You install a new server named Server2 that runs Windows Server 2012 R2 and has Network Policy Server (NPS) installed.You need to ensure that all accounting requests for Server2 are forwarded to Admin1.On Server2, you create a new remote RADIUS server group named Group1 that contains Admin1.What should you configure next on Server2?To answer, select the appropriate node in the answer area.Hot Area:**Answer:** Explanation:Explanation/Reference:Explanation: Connection request policies are sets of conditions and settings that allow network administrators to designate which Remote Authentication Dial-In User Service (RADIUS) servers perform the authentication and authorization of connection requests that the server running Network Policy Server (NPS) receives from RADIUS clients. Connection request policies can be configured to designate which RADIUS servers are used for RADIUS accounting.
