Do not miss the easy way to your success future.

**NEW QUESTION: 1**A. Option AB. Option DC. Option BD. Option C**Answer: D**

**NEW QUESTION: 2**You are developing an application that uses ASP.NET Core Identity for authorization. The application must use an existing Microsoft Azure Table Storage instance to store user information. You create a custom UserStore class.You need to register the class as a dependency.Which two interfaces should you implement? Each correct answer presents part of the solution.NOTE: Each correct selection is worth one point.**A.** IUserStore**B.** IQueryableUserStore**C.** IUserSecurityStampStore**D.** IUserPasswordStore**E.** IUserLoginStore

**Answer: A, E**Explanation:Explanation/Reference:Explanation:D: Create a UserStore class that provides the methods for all data operations on the user. This class is equivalent to the UserStore class. In your UserStore class, implement IUserStore<TUser> and the optional interfaces required. You select which optional interfaces to implement based on the functionality provided in your app.Interfaces to implement when customizing user store luserStoreThe IUserStore<TUser> interface is the only interface you must implement in the user store. It defines methods for creating, updating, deleting, and retrieving users.luserLoginStore The IUserLoginStore<TUser, TKey> defines the methods you must implement in your user store to enable external authentication providers. It contains methods for adding, removing and retrieving user logins, and a method for retrieving a user based on the login information.
