As your reliable cooperation partners, we are responsible for all candidates and we aim to help all of you pass C_IEE2E_2404 exam test and get the IT certification successfully.

NEW QUESTION: 1Which command is used to enable CHAP authentication, with PAP as the fallback method, on a serial interface?
A. Router(config-if)# ppp authentication chap pap
B. Router(config-if)# authentication ppp chap pap
C. Router(config-if)# authentication ppp chap fallback ppp
D. Router(config-if)# ppp authentication chap fallback ppp
Answer: A
Explanation: The command "ppp authentication chap pap" command indicates the CHAP authentication is used first. If it fails or is rejected by other side then uses PAP instead. If you want to use PAP first (then CHAP) you can use the "ppp authentication pap chap" command

NEW QUESTION: 2 A. Option DB. Option BC. Option CD. Option EE. Option A **Answer: A,B**

Explanation: A: Creating and configuring a hybrid deployment with the Hybrid Configuration wizard is now a single process in Microsoft Exchange Server 2013. First, the wizard creates the HybridConfiguration object in your on-premises Active Directory. This Active Directory object stores the hybrid configuration information for the hybrid deployment and is updated by the Hybrid Configuration wizard. Next, the wizard gathers existing on-premises Exchange and Active Directory topology configuration data, Office 365 tenant and Exchange Online configuration data, defines several organization parameters and then runs an extensive sequence of configuration tasks in both the on-premises and Exchange Online organizations. E: Note: * By default, Microsoft Exchange Server 2013 doesn't allow you to send mail outside of your domain. To send mail outside your domain, you need to create a Send connector. * Use the Set-SendConnector cmdlet to modify a Send connector. / Parameters include TlsCertificateName The TlsCertificateName parameter specifies the X.509 certificate to use with TLS sessions and secure mail. Valid input for this parameter is [I]Issuer[S]Subject. The Issuer value is found in the certificate's Issuer field, and the Subject value is found in the certificate's Subject field. You can find these values by running the Get-ExchangeCertificate cmdlet.

NEW QUESTION: 3 Ein Mitarbeiter hat eine neue Anwendung auf einem freigegebenen Windows 10-PC installiert. Am nächsten Tag hat nur der Mitarbeiter, der die Anwendung installiert hat, Zugriff auf die Anwendung. Welche der folgenden Arten von Benutzerkonten hat der Mitarbeiter wahrscheinlich am MEISTEN? A. Gast B. Administrator C. Standardbenutzer D. Superuser E. Begrenzter Benutzer **Answer: B**

NEW QUESTION: 4 You want to flash back a test database by five hours. You issue this command: SQL > FLASHBACK DATABASE TO TIMESTAMP (SYSDATE - 5/24); Which two statements are true about this flashback scenario? A. The database must have multiplexed redo logs for the flashback to succeed. B. The database must be opened in read-only mode to check if the database has been flashed back to the correct SCN. C. The database must be opened with the RESETLOGS option after the flashback is complete. D. The database must be MOUNTED for the flashback to succeed. E. The database must use block change tracking for the flashback to succeed. F. The database must be opened in restricted mode for the flashback to succeed.

Answer: D,F Explanation: B: The target database must be mounted with a current control file, that is, the control file cannot be a backup or have been re-created. D: You must OPEN RESETLOGS after running FLASHBACK DATABASE. If datafiles are not flashed back because they are offline, then the RESETLOGS may fail with an error. Note: * RMAN uses flashback logs to undo changes to a point before the target time or SCN, and then uses archived redo logs to recover the database forward to make it consistent. RMAN automatically restores from backup any archived logs that are needed. * SCN: System Change Number * FLASHBACK DATABASE to One Hour Ago: Example The following command flashes the database by 1/24 of a day, or one hour: RMAN> FLASHBACK DATABASE TO TIMESTAMP (SYSDATE-1/24);
