NEW QUESTION: 3Your network contains anActive Directory domain. All domain controllers run Windows Server 2008 R2.The network contains a DHCP server named Server1 on a subnet named Subnet1.You implement a new subnet named Subnet2. Subnet2 contains a server named Server2.On Server1, you create a DHCP scope for Subnet2.You need to configure Server2 to ensure that the client computers on Subnet2 can receive IPaddresses from Server1. What should you do?To answer move the appropriate actions from the Possible Actions list to the NecessaryActions area and arrange them in the correct order.**Answer:** Explanation:

NEW QUESTION: 4DRAG DROPChoose and select the information present in the header of a single IP packet that are helpful in packet filtering.Select and Place:**Answer:** Explanation: Explanation/Reference:Explanation:An IP packet is a formatted unit of data carried by a packet mode computer network. A packet consists of two kinds of data:control information and user data (also known as payload). The control information provides data the network needs to deliver the user data, for example: source and destination addresses, error detection codes like checksums, and sequencing information. Typically, control information is found in packet headers and trailers, with user data in between.IP packets are composed of a header and payload. Every IP packet has a set of headers containing certain information. The main information is as follows:IP source addressIP destination addressProtocol (whether the packet is a TCP, UDP, or ICMP packet)TCP or UDP source portTCP or UDP destination portICMP message typeThe structure of an IP packet is as follows:
