Our passing rate for 250-587 is high up to 99.27% based on past data, Yes, it is silent and clear, Pass Your Exam in Next 24 Hours.

NEW QUESTION: 1

アーキテクチャ図に示されているように、企業のWebサイトに対してユーザーを認証する必要があります。

どの2つの値を使用する必要がありますか？それぞれの正解は、解決策の一部を示しています。

注：正しい選択はそれぞれ1ポイントの価値があります。**A.** AzureADテナントID**B.**

IDトークンの署名**C.** HTTP応答コード**D.** AzureADエンドポイントURI**E.** IDトークンの申し立て

Answer: B,D Explanation: Explanation Claims in access tokens JWTs (JSON Web Tokens) are split into three pieces: * Header - Provides information about how to validate the token including information about the type of token and how it was signed. * Payload - Contains all of the important data about the user or app that is attempting to call your service. * Signature - Is the raw material used to validate the token. Your client can get an access token from either the v1.0 endpoint or the v2.0 endpoint using a variety of protocols. Scenario: User authentication (see step 5 below) The following steps detail the user authentication process: * The user selects Sign in in the website. * The browser redirects the user to the Azure Active Directory (Azure AD) sign in page. * The user signs in. * Azure AD redirects the user's session back to the web application. The URL includes an access token. * The web application calls an API and includes the access token in the authentication header. The application ID is sent as the audience ('aud') claim in the access token. * The back-end API validates the access token. Reference:
