NEW QUESTION: 1Scenario: A Citrix Engineer recently implemented a Provisioning Services environment, which includes a single Provisioning Services server with a locally attached Store. Management would like the engineer to expand the environment so that it can be used to support several critical use cases within the organization. The following requirements exist for TFTP: TFTP requests must be distributed among the available Provisioning Services in the environment. TFTP requests must NOT be sent to Provisioning Services servers that are offline. The engineer configured a Microsoft DHCP server to support the DHCP options boot method and will add a second Provisioning Services server to the environment soon. Which action should the engineer take after the second Provisioning Services server is added to best meet these requirements? **A.** Add multiple option 66 entries to the Microsoft DHCP server. **B.** Implement DNS-based round-robin load balancing with an A record that includes both Provisioning Services servers. **C.** Add the new Provisioning Services server name to the bootstrap file. **D.** Use a NetScaler appliance to implement server load balancing of the TFTP service. **Answer: D**

NEW QUESTION: 2A. Option AB. Option BC. Option CD. Option D **Answer: A**

NEW QUESTION: 3You write the following method (line numbers are included for reference only): You need to ensure that the method extracts a list of URLs that match the following pattern: @ http://(www.)?([

Related Posts.] +).com; Which code should you insert at line 07? **A.** Option B **B.** Option D **C.** Option C **D.** Option A **Answer: B** Explanation: Explanation/Reference: * MatchCollection Represents the set of successful matches found by iteratively applying a regular expression pattern to the input string. The collection is immutable (read-only) and has no public constructor. The Regex.Matches method returns a MatchCollection object. * List<T>.Add Method Adds an object to the end of the List<T>. Incorrect: Not A: ICollection.SyncRoot Property For collections whose underlying store is not publicly available, the expected implementation is to return the current

instance. Note that the pointer to the current instance might not be sufficient for collections that wrap other collections; those should return the underlying collection's SyncRoot property.
