NEW QUESTION: 1 Which two functions are performed by the DR in OSPF? (Choose two.)
A. The DR is responsible for originating the type 4 LSA into one area.
B. The DR is responsible for the flooding throughout one OSPF area.
C. The DR originates the network LSA on behalf of the network.
D. The DR forms adjacencies with all other OSPF routers on the network, in order to synchronize the LSDB across the adjacencies.
Answer: C, D
Explanation: The DR originates the network LSA (LSA Type 2) which is sent to all the routers on the segment it is adjacent to -> A is correct. Type 2 is flooded within its area only; does not cross ABR -> B is incorrect. The broadcast and non-broadcast network types elect a DR/BDR. They form adjacencies to all other OSPF routers on the network and help synchronize the Link State Database (LSDB) across the adjacencies -> C is correct. LSA Type 4 are originated by the ABR to describe an ASBR to routers in other areas so that routers in other areas know how to get to external routers through that ASBR -> D is incorrect.
