**NEW QUESTION: 2**You are implementing a solution to meet the security requirements for Outlook authentication.You purchase a new certificate that has a subject name of mail.proseware.com and SANs of autodiscover.proseware.com and oa.proseware.com.You create a host (A) record for oa.proseware.com in the public DNS zone.Remote users report that they fail to connect to their mailbox by using Outlook.You need to ensure that the remote users can connect to their mailbox from Outlook. The solution must meet the security requirements. Which two commands should you run? (Each correct answer presents part of the solution. Choose two.)**A.** Set-OutlookAnywhere -ExternalHostName oa.proseware.com -ExternalClientAuthenticationMethod Basic -ExternalClientsRequireSsl \$true -InternalHostName mail.proseware.com - InternalClientAuthenticationMethod NTLM -InternalClientsRequireSsl Strue**B.** Set-OutlookProvider EXPR -CertPrincipalName msstd:mail.proseware.com**C.** Set-OutlookProvider EXPR -CertPrincipalName msstd:oa.proseware.com**D.** Set-OutlookAnywhere -ExternalHostName mail.proseware.com-

ExternalClientAuthenticationMethod Basic -ExternalClientsRequireSsl \$true -InternalHostName oa.proseware.com - InternalClientAuthenticationMethod NTLM -InternalClientsRequireSsl \$true

**Answer: A,B** Explanation: Explanation/Reference: Explanation: Set-OutlookProvider EXPR The common benefit of enabling Outlook Provider, is to assure Outlook client connecting to a specific server, which has a specific name in subject name field on the certificate. Set-OutlookProvider EXPR -CertPrincipalName msstd:mail.contoso.com Running above command will force Outlook client "Only connect to proxy servers that have this principal name in their certificate" to be enabled and value set to msstd:mail.contoso.com. If client connects to a proxy server, which does not have mail.contoso.com in subject name field in the certificate, the connection will fail. Set-OutlookAnywhere Use the Set-OutlookAnywhere cmdlet to modify the properties on a computer running Microsoft Exchange Server 2013 enabled for Microsoft Outlook Anywhere. The ExternalHostname parameter specifies the external host name to use in the Microsoft Outlook profiles for users enabled for Outlook Anywhere. The InternalHostname parameter specifies the internal hostname for the Outlook Anywhere virtual directory. A Subject name of the certificate is mail.proseware.com not oa.proseware.com NOT C Subject name of the certificate is mail.proseware.com not oa.proseware.com B ExternalHostName oa.proseware.com is correct as oa.proseware.com is a host (A) record in the public DNS zone. NOT D ExternalHostName mail.proseware.com is NOT correct as oa.proseware.com is a host (A) record in the public DNS zone.

Most of the users work remotely, including the users in the finance department. The finance department users reside in an organizational unit (OU) named Finance. Trey Research purchases a partner pharmaceutical company named Fabrikam, Inc. Fabrikam has 2,000 users and hosts its own Exchange Server 2010 organization. Existing Environment Active Directory Environment The network of Trey Research contains an Active Directory forest. The forest contains an empty parent domain named treyresearch.com and a child domain named main.treyresearch.com. The forest contains one site named DefaultSite. The Trey Research network and the Fabrikam network connect to each other by using a WAN link. A two-way trust exists between the Trey Research and Fabrikam networks. Trey Research Exchange Server Organization Trey Research has an Exchange Server 2013 organization that contains four servers. The servers are configured as shown in the following table. EX1 and EX2 are the members of a database availability group (DAG) named DAG1. Trey Research has three databases named DB1, DB2, and DB3. DB1 and DB2 replicate between all of the servers in DAG1. DB3 is mounted on EX4. The storage on EX1 and EX2 is configured as shown in the following table. The Exchange Server 2013 servers at Trey Research are configured as follows: EX3 and EX4 perform spam filtering. The public folder hierarchy mailbox is homed on DB3. Each mailbox database contains a public folder mailbox. HTTP traffic is load balanced by using a Layer 4 hardware load balancer. The hardware load balancer uses the OWA virtual directory for health monitoring. On EX1 and EX2, the mailbox database files and log files are stored on volume mount points. IMAP is enabled on EX4 to download email messages for a custom help desk application. Remote users access their mailbox by using Outlook Web App and Exchange ActiveSync. The custom help desk application uses a service account that has a display name of Help Desk and an SMTP address of [\[email#160;protected\]](#). Fabrikam Exchange Server Organization Fabrikam has an Exchange Server 2010 organization that contains two servers. The servers are configured as shown in the following table. Fabrikam plans to implement the address rewrite feature to change the SMTP domain name of all outbound email to use the treyresearch.com SMTP suffix. Problem Statements Trey Research identifies the following issues: Recently on EX2, Volume1 failed for three days. Once the volume was repaired, reseeding the database from EX1 took more than six hours. You recently discovered that when the MExchangeOWAAppPool application pool on EX3 was in a stopped state, the hardware load balancer marked EX3 as offline. Users report that during the installation of updates on the Exchange Server 2013 servers, the users lost access to

their mailbox and were unable to modify public folders. Several finance department users store sensitive data on their mobile device. The legal department requires that Exchange ActiveSync be disabled for all of the finance department users. An Active Directory administrator reports that the domain controllers in the treyresearch.com domain are overused. The administrator requests that the Exchange Server 2013 servers only use the domain controllers in the main.treyresearch.com domain. Requirements Business Goal The legal department requires that the finance department users have a segmented view of the global address list (GAL) that only shows recipients in the finance department. Planned Changes Trey Research plans to implement the following spam confidence level (SCL) configurations: Block email messages when the SCL score is 9. Move the email messages to the postmaster mailbox when the SCL score is 7. Block email messages and send a non-delivery report (NDR) when the SCL score is 8. Resource Utilization Requirements Users report that their connection to Outlook Web App is slow since the deployment of IMAP on EX4. The users do not report that they experience performance issues when they use their mobile device. Trey Research reports that the IMAP service is not business critical and must not have a higher priority over hardware resources than Outlook Web App. On EX4, Outlook Web App has the same priority over hardware resources as Exchange ActiveSync.
