Training For MCC-201 Gets Interesting, The contents of MCC-201 study questions are compiled by our experts through several times of verification and confirmation.

Most IT workers like using it.

NEW QUESTION: 1You are designing an Azure application. The application includes services hosted in different geographic locations. The service locations may change.You must minimize the cost of communication between services.You need to recommend an approach for data transmission between your application and Azure services. The solution must minimize administrative effort.What should you recommend?**A.** Azure Table storage**B.** Azure Queue storage**C.** Service Management APID**D.** Service Bus**Answer: D****Explanation:**The cost of ACS transactions is insignificant when performing messaging operations against Service Bus queues. Service Bus acquires one ACS token per a single instance of the messaging factory object. The token is then reused until it expires, after about 20 minutes. Therefore, the volume of messaging operations in Service Bus is not directly proportional to the amount of ACS transactions required to support these operations.Reference: Azure Queues and Service Bus Queues - Compared and Contrasted<https://msdn.microsoft.com/library/azure/hh767287.aspx>

NEW QUESTION: 2What is used by lite Local LUN Move data mobility feature?**A.** Transparent Data Transfer**B.** SANCopy push**C.** Common base Snapshots**D.** Inband Migration Tool**Answer: A**

NEW QUESTION: 3A company hosts a legacy application that runs on an Amazon EC2 instance inside a VPC without internet access Users access the application with a desktop program installed on their corporate laptops. Communication between the laptops and the VPC flows through AWS Direct Connect (DX).
