The reasons why our exam preparation [New NS0-ASM-ASE3 Test Simulator](#) materials attract your attention are as follows.

NEW QUESTION: 1A customer recently reconfigured their Exchange 2010 environment. They placed the log and system files on the L: drive and mounted the mailbox stores on L:SG1DBMP. They report they updated the associated Replication Manager replica job to reflect the change, but the mounts to the backup server fail. What do you advise the customer?**A.** Log and system files on same volume are not supported.**B.** A separate replica job must be configured for the mailbox stores.**C.** The mailbox store replica must be part of the same replica job as the log files.**D.** Additional clone targets need to be added to the storage pool.**Answer: B**

NEW QUESTION: 2You need to implement the monitoring solution for the Listings database. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:**
Explanation:ExplanationTopic 1, ADatumCorporationOverviewGeneral Overview
ADatumCorporation is a real estate firm that has offices throughout North America.ADatumhas a main office and four branch offices. The main office is located in Seattle. The branch offices are located in New York, Montreal, Denver, and Vancouver.Existing EnvironmentNetwork InfrastructureThe network contains one Active Directory domain namedADatum.com. Each office contains one domain controller.Each office has a 100-Mbps connection to the Internet that is 20 percent saturated on average. The offices connect to each other through the Internet by using VPN appliances.ADatumuses the public IP addresses shown in the following table.SQL Server InfrastructureIn the main office,ADatumhosts a Microsoft SQL Server instance on a server named SQL1. SQL1 has a400-GB database named Listings. Log-shipped copies of Listings are present in each branch office. The copies are used for reporting. Currently, all of the SQL Server instances run SQL Server 2014 Enterprise edition.Each branch office has an application server that hosts an application named App1. App1 is configured to connect to the Listings database on each local SQL Server instance for reporting and to connect to the SQL Server instance in the main office for any updates to property listings.The main office also has an application server that hosts App1. The application server connects to the local Listings database for reporting and for any updates to the property listings.Historic activity of the Listings database shows a maximum of 475 concurrent requests from as many as 200 concurrent connections.User IssuesUsers report that, frequently, they are disconnected from the Listings database when they run reports. Users also report that there is an unacceptable delay between when a property listing is updated and when the updated listing appears in the listings reports.Developers report concerns about the lack of a testing environment in which code changes can be validated before being deployed to the production Listings database.
