NEW QUESTION: 1A sysops administrator is implementing SSL for a domain of an internet facing application running behind an Application load balancer (ALB). The administrator decides to use an SSL certificates from Amazon certificate Manager (ACM) to secure it. Upon creating a request for the ALB fully qualified domain name (FQND), it fails, and the error message "Domain not allowed" is displayed.How can the administrator fix this issue?**A.** Select the certificate request in the ACM console and resend the validation email.**B.** Contact AWS support and verify the request by answering security challenge questions.**C.** Contact the domain register and ask them to provide the verification required by AWS.**D.** Place a new request with the proper domain name instead of the ALB FQDN.**Answer: D**

NEW QUESTION: 2You are designing a solution with a Hitachi NAS Platform 3200 connected to a Hitachi AMS2000 storage system. A key requirement is to ensure path failover in the event of an AMS storage port failure. Which configuration must be used?**A.** path from hports 1 and 3 to each system drive**B.** path from hports 1, 3, 5 and 7 to each system drive**C.** path from hports 1, 2, 3 and 4 to each system drive**D.** path from hports 2 and 4 to each system drive**Answer: B**

NEW QUESTION: 3You are using Microsoft Test Manager (MTM) to run an automated test suite with 240 long-running tests.In your test environment, you have set up four client machines to run these tests. You have assigned the Client role to all four machines.You need to make sure that when you run the test suite, the tests are distributed equally over all four client machines. What should you do?**A.** In the Content view, configure the test suite to use all four environments.**B.** Add an even amount of RAM to all four machines.**C.** In the Test Controller Manager view, change the distribution property for the test controller to 4.**D.** In the Test Controller Manager view, change the Weighting property for all four test agents to 60.**Answer: D****Explanation:**Explanation/Reference:Test AgentThe test agent runs as a service that listens for requests from the test controller to start a new test. When a request is received, the test agent service starts a process on which to run the tests. Each test agent runs the same load test.Test agents are assigned a weight by the administrator, and load is distributed according to a test agent's weighting. For example, if test agent 1 has a weighting of 30, and test agent 2 has a weighting of 70, and the load is set to 1000 users, then test agent 1 simulates 300 virtual users whereas test agent 2 simulates700 virtual users.Reference: Configuring Test Controllers and

Test Agents for Load Testing

NEW QUESTION: 4 In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. Once you answer a question in this section you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. You are the SharePoint administrator for a company. You must provide an on-premises SharePoint solution that helps monitor and analyze your business in order to make informed business decisions that align with the objectives and strategies for the company. The solution must include the following features: Dashboards Scorecards Key Performance Indicators (KPI) You configure Power BI. Does the solution meet the goal? **A. Yes** **B. No**
Answer: B
Explanation: Explanation/Reference: Explanation: You need Performance Point Services which is a SharePoint BI tool. This is not the same as Power BI.
