NEW QUESTION: 2 In addition to taking backups of your databases, you should also backup up files stated below. Which of these files store updates that have been made after the backup was made?
A. My.ini
B. Binary log files
C. Master.info
D. My.cnf
Answer: B
Explanation: The Binary log is a log file that contains a record of statements that modify data. This log is stored in the binary format and its contents can be viewed using the mysqlbinlog utility. The Binary log is used for communication between the master and slave replication servers, and can also be used for data recovery. Statements that are part of a multiple-statement transaction are written as a group after the transaction has been committed. The log contains UPDATE and DELETE statements but does not contain the SELECT statement.
Answer C and B are incorrect. These are option files used by the server. These files contain configuration information that must be restored after a crash.
Answer D is incorrect. Replication slave servers create a master.info file that contains information needed for connecting to the master server.
