NEW QUESTION: 1 A customer has dropped off a prescription order for Benazepril. Which of the following conditions does our customer most likely need this for? **A.** Ear Infection **B.** Hypertension **C.** Type II Diabetes **D.** Epilepsy **Answer: B**

NEW QUESTION: 2 Drag and drop each statement about routing protocols on the left to the matching routing protocol type on the right. Select and Place: **Answer:** Explanation: Explanation

NEW QUESTION: 3 SIMULATION a. Retrieve the content of the existing secret named default-token-xxxxx in the testing namespace. Store the value of the token in the token.txtb. Create a new secret named test-db-secret in the DB namespace with the following content: username: mysql password: password@123 Create the Pod name test-db-pod of image nginx in the namespace db that can access test-db-secret via a volume at path /etc/mysql-credentials **Answer:** Explanation: To add a Kubernetes cluster to your project, group, or instance: Navigate to your: Project's Operations > Kubernetes page, for a project-level cluster. Group's Kubernetes page, for a group-level cluster. Admin Area > Kubernetes page, for an instance-level cluster. Click Add Kubernetes cluster. Click the Add existing cluster tab and fill in the details: Kubernetes cluster name (required) - The name you wish to give the cluster. Environment scope (required) - The associated environment to this cluster. API URL (required) - It's the URL that GitLab uses to access the Kubernetes API. Kubernetes exposes several APIs, we want the "base" URL that is common to all of them. For example, https://kubernetes.example.com rather than https://kubernetes.example.com/api/v1. Get the API URL by running this command: `kubectl cluster-info | grep -E 'Kubernetes master|Kubernetes control plane' | awk '/http/ {print $NF}'` CA certificate (required) - A valid Kubernetes certificate is needed to authenticate to the cluster. We use the certificate created by default. List the secrets with `kubectl get secrets`, and one should be named similar to default-token-xxxxx. Copy that token name for use below. Get the certificate by running this command: `kubectl get secret <secret name> -o jsonpath='{["data"]["ca.crt"]}'`
