NEW QUESTION: 4 DRAG DROP You manage a solution in Azure. The solution is performing poorly. You need to recommend tools to determine causes for the performance issues. What should you recommend? To answer, drag the appropriate monitoring solutions to the correct scenarios. Each monitoring solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. **NOTE:** Each correct selection is worth one point. **Answer:** Explanation: Box 1: Azure Log Analytics Box 2: Azure Monitor Box 3: Azure Log Analytics Note: Azure Monitor provides base-level infrastructure metrics and logs for most services in Microsoft Azure. Azure Log Analytics plays a central role in Azure management by collecting telemetry and other data from a variety of sources and providing a query language and analytics engine that gives you insights into the operation of your applications and resources. You can either interact directly with Log Analytics data through log searches and views, or you may use analysis tools in other Azure services that store their data in Log Analytics such as Application Insights or Azure Security Center.
