NEW QUESTION: 1You have a Microsoft 365 E5 subscription.From Microsoft Azure Active Directory (Azure AD), you create a security group named Group1. You add 10 users to Group1. You need to apply app enforced restrictions to the members of Group1 when they connect to Microsoft Exchange Online from non-compliant devices, regardless of their location.What should you do? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:Explanation

NEW QUESTION: 2The following descriptions for the CIFS protocol are correct: (multiple choice)**A.** Transfer data based on TCP protocol**B.** Transfer data based on UDP protocol**C.** windows platform file sharing protocol**D.** linux platform file sharing protocol**Answer: A,C**

NEW QUESTION: 3You have a Microsoft 365 tenant.You have a line-of-business application named App1 that users access by using the My Apps portal.After some recent security breaches, you implement a conditional access policy for App1 that uses Conditional Access App Control. You need to be alerted by email if impossible travel is detected for a user of App1. The solution must ensure that alerts are generated for App1 only.What should you do?**A.** From Microsoft Cloud App Security, create a Cloud Discovery anomaly detection policy.**B.** From the Azure Active Directory admin center, modify the conditional access policy.**C.** From Microsoft Cloud App Security, create an app discovery policy.**D.** From Microsoft Cloud App Security, modify the impossible travel alert policy.**Answer: D**Explanation:Impossible travel detection identifies two user activities (is a single or multiple sessions) originating from geographically distant locations within a time period shorter than the time it would have taken the user to travel from the first location to the second.We need to modify the policy so that it applies to App1 only.Reference: <https://docs.microsoft.com/en-us/cloud-app-security/anomaly-detection-policy>

NEW QUESTION: 4On a regular users workstation the route command takes a long time before printing out the routing table. Which of the following errors does that indicate?**A.** One of the routers in the routing table is not available which causes the automatic router failure detection mechanism (ARF-D) to wait for a timeout.**B.** DNS resolution may not be working as route by default tries to resolve names of routers and destinations and may run into a timeout.**C.** There may accidentally be more than one default router in which case a default router election has to be done on the network in order to choose one router as the default.**D.** The local routing information may be corrupted and must be re-validated using a routing protocol.**Answer: B**
