NEW QUESTION: 1 Drag and Drop Question You are developing a multi-tenant ASP.NET Core application that will be hosted on Azure. The application will support multiple database platforms, including Azure SQL and on-premises SQL Server instances. You need to ensure the application supports distributed transactions. Which technologies should you use? To answer, drag the appropriate technologies to the correct scenarios. Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. **NOTE:** Each correct selection is worth one point. **Answer:** Explanation: Explanation: Box 1: Elastic Database Client Library Sharded database applications in Azure: With this scenario, the data tier uses the Elastic Database client library or self-sharding to horizontally partition the data across many databases in SQL DB. Box 2: MSDTC Elastic database transactions cannot stretch across on-premises SQL Server and Azure SQL Database. For distributed transactions on-premises, continue to use MSDTC. References: <https://docs.microsoft.com/en-us/azure/sql-database/sql-database-elastic-transactions-overview>

NEW QUESTION: 2 Symantec Backup Exec System Recovery 8.5 can create independent recovery points and incremental recovery points. Which two statements describe incremental recovery points? (Select two.) **A.** They capture the entire contents of the volume regardless of if or when other recovery points were created. **B.** They are stored in the .sv2i format and occupy significantly less disk space when compared to independent recovery points. **C.** They capture changes that were made to the computer after the last base recovery point was created. **D.** They are stored in the .iv2i format and occupy significantly less disk space when compared to independent recovery points. **E.** They capture changes that are made to the computer after the last base or incremental recovery point was created. **Answer: D,E**

NEW QUESTION: 3 How are asynchronous update requests of SAP transactions assigned to work processes of type UpdateV1 or UpdateV2? There are 2 correct answers to this question. **A.** The processing priority for V1 and V2 update requests is determined by the corresponding value of the parameters rdisp/wp_no_vb and rdisp/wp_no_vb2. **B.** If V2 update work processes are not configured, V1 work processes handle all update requests. **C.** All update requests are assigned to V1 and V2 work processes in a round-robin fashion. **D.** If V2 update processes are configured, V2 update requests will only be processed in available V2 update work processes. **Answer: B,D**
