Highly efficient learning plan.

**NEW QUESTION: 1** Which three ESP fields can be encrypted during transmission? (Choose three.)  
**A.** Pad Length **B.** Next Header **C.** Security Parameter Index **D.** Sequence Number **E.** MAC Address **F.** Padding  
**Answer: A,B,F**  
**Explanation:** The packet begins with two 4-byte fields (Security Parameters Index (SPI) and Sequence Number). Following these fields is the Payload Data, which has substructure that depends on the choice of encryption algorithm and mode, and on the use of TFC padding, which is examined in more detail later. Following the Payload Data are Padding and Pad Length fields, and the Next Header field. The optional Integrity Check Value (ICV) field completes the packet.
