NEW QUESTION: 1You are routing traffic between company departments that reside in the same physical location. Which of the following are you least likely to use? **A. OSPF B. BGP C. EIGRP D. static routes**
Answer: B
Explanation: Explanation/Reference: Section: Addressing and Routing Protocols in an Existing Network Explanation Explanation: Of the available choices, you are least likely to use Border Gateway Protocol (BGP) if you are routing traffic between company departments that reside in the same physical location. BGP is more likely to be used to route traffic from a network in one autonomous system (AS) to traffic in another AS. Unlike some other routing protocols, BGP does not use a neighbor discovery process. Therefore, neighbor relationships between a BGP router and a router in either the local AS or a remote AS must be manually configured. Most likely, you would use Open Shortest Path First (OSPF), Enhanced Interior Gateway Routing Protocol (EIGRP), or static routes to route traffic between company departments that reside in the same physical location. Both OSPF and EIGRP support neighbor discovery. However, the neighbors must reside in the same EIGRP AS or OSPF area for those processes to work without extra configurations such as manual configuration or a remote neighbor or a virtual link. The use of static routes in this scenario would depend on the level of complexity and the desired level of scalability in the network topology. If you were simply connecting two branches in different virtual LANs (VLANs) and never planning to expand, static routes would keep router CPU overhead and configuration complexity to a minimum.

NEW QUESTION: 2 SIMULATION A network associate is adding security to the configuration of the Corp1 router. The user on host C should be able to use a web browser to access financial information from the Finance Web Server. No other hosts from the LAN nor the Core should be able to use a web browser to access this server. Since there are multiple resources for the corporation at this location including other resources on the Finance Web Server, all other traffic should be allowed. The task is to create and apply an access-list with no more than three statements that will allow ONLY host C web access to the Finance Web Server. No other hosts

will have web access to the Finance Web Server. All other traffic is permitted. Access to the router CLI can be gained by clicking on the appropriate host. All passwords have been temporarily set to "cisco". The Core connection uses an IP address of 198.18.196.65. The computers in the Hosts LAN have been assigned addresses of 192.168.33.1 - 192.168.33.254 host A 192.168.33.1 host B 192.168.33.2 host C 192.168.33.3 host D 192.168.33.4 The servers in the Server LAN have been assigned addresses of 172.22.242.17 - 172.22.242.30. The Finance Web Server is assigned an IP address of 172.22.242.23. **Answer:** Explanation: Select the console on Corp1 router Configuring ACL Corp1 > enable Corp1 # configure terminal comment: To permit only Host C (192.168.33.3) {source addr} to access finance server address (172.22.242.23) {destination addr} on port number 80 (web) Corp1 (config) # access-list 100 permit tcp host 192.168.33.3 host 172.22.242.23 eq 80 comment: To deny any source to access finance server address (172.22.242.23) {destination addr} on port number 80 (web) Corp1 (config) # access-list 100 deny tcp any host 172.22.242.23 eq 80 comment: To permit ip protocol from any source to access any destination because of the implicit deny any any statement at the end of ACL. Corp1 (config) # access-list 100 permit ip any any Applying the ACL on the Interface comment: Check show ip interface brief command to identify the interface type and number by checking the IP address configured. Corp1 (config) # interface fa 0/1 If the ip address configured already is incorrect as well as the subnet mask. This should be corrected in order ACL to work type this commands at interface mode : no ip address 192.x.x.x 255.x.x.x (removes incorrect configured ip address and subnet mask) Configure Correct IP Address and subnet mask: ip address 172.22.242.30 255.255.255.240 (range of address specified going to server is given as 172.22.242.17 - 172.22.242.30) Comment: Place the ACL to check for packets going outside the interface towards the finance web server. Corp1 (config-if) # ip access-group 100 out Corp1 (config-if) # end Important: To save your running config to startup before exit. Corp1 # copy running-config startup-config Verifying the Configuration: Step 1: show ip interface brief command identifies the interface on which to apply access list. Step 2: Click on each host A, B, C, & D. Host opens a web browser page, Select address box of the web browser and type the ip address of finance web server (172.22.242.23) to test whether it permits /deny access to the finance web Server. Step 3: Only Host C (192.168.33.3) has access to the server. If the other host can also access then maybe something went wrong in your configuration. Check whether you configured correctly and in order. Step 4: If only Host C (192.168.33.3) can access the Finance Web Server you can click on NEXT button to successfully submit the ACL SIM.
