Furthermore, the users get 90 days free updates, Only 20-30 hours on our C-S4CSV-2308 learning guide are needed for the client to prepare for the test and it saves our client's time and energy.

NEW QUESTION: 1 Which of the following is an estimating technique that uses the values of parameters from previous similar projects for estimating the same parameter or measure for a current project?
A. Three-point estimating
B. Parametric estimating
C. Analogous estimating
D. Reserve analysis
Answer: C
Explanation: Explanation/Reference: Explanation: 7.2.2.2 Analogous Estimating
Analogous cost estimating uses the values such as scope, cost, budget, and duration or measures of scale such as size, weight, and complexity from a previous, similar project as the basis for estimating the same parameter or measurement for a current project. When estimating costs, this technique relies on the actual cost of previous, similar projects as the basis for estimating the cost of the current project. It is a gross value estimating approach, sometimes adjusted for known differences in project complexity. Analogous cost estimating is frequently used to estimate a value when there is a limited amount of detailed information about the project, for example, in the early phases of a project. Analogous cost estimating uses historical information and expert judgment

NEW QUESTION: 2 Given the data set WORK.EMPDATA: Which one of the following where statements would display observations with job titles containing the word 'Manager'?
