**NEW QUESTION: 3** Your network contains an Active Directory domain named contoso.com. The domain contains a member server named Server1 that has the Active Directory Federation Services server role installed. All servers run Windows Server 2012. You complete the Active Directory Federation Services Configuration Wizard on Server1. You need to ensure that client devices on the internal network can use Workplace Join. Which two actions should you perform on Server1? (Each correct answer presents part of the solution. Choose two.)**A.** Run Set-AdfsProxyProperties HttpPort 80.**B.** Edit the multi-factor authentication global

authentication policy settings.**C.** Run Enable-AdfsDeviceRegistration.**D.** Edit the primary authentication global authentication policy settings.**E.** Run Enable-AdfsDeviceRegistration-PrepareActiveDirectory.**Answer: C,D**Explanation:C. To enable Device Registration Service on your federation server, open a Windows PowerShell command window and type: Enable-AdfsDeviceRegistrationRepeat this step on each federation farm node in your AD FS farm.E. Enable seamless second factor authenticationSeamless second factor authentication is an enhancement in AD FS that provides an added level of access protection to corporate resources and applications from external devices that are trying to access them. When a personal device is Workplace Joined, it becomes a 'known' device and administrators can use this information to drive conditional access and gate access to resources.To enable seamless second factor authentication, persistent single sign-on (SSO) and conditional access for Workplace Joined devices.In the AD FS Management console, navigate to Authentication Policies. Select Edit Global Primary Authentication. Select the check box next to Enable Device Authentication, and then click OK.Reference: Configure a federation server with Device Registration Service.

**NEW QUESTION: 4**Your role is that of a consultant to the Lead Enterprise Architect in a company that develops wind turbines for use in wind farms. The company has three manufacturing facilities, one in North America, one in Asia, and one in Europe. Each of these facilities supplies the power industry in its region. The company recognizes that the long-term technical potential of wind energy can address the current global dependency on carbon fuels, in order to do so this will require wind turbines to be installed over the large areas and in areas of higher wind resources. In particular offshore wind farms can contribute substantially more energy than land stationed turbines. The research arm of the company has pioneered the development of an offshore wind turbine design, with an improved turbine blade and power system, that will produce up to 20% more energy. This will allow the production of significantly more salable energy. This new design is ready to go into production. The company has a mature Enterprise Architecture practice supported by a cross-functional Architecture Board and uses the TOGAF standard. The Chief Information Officer and the Chief Operating Officer co-sponsor the Enterprise Architecture program. As part of putting the new design into production, a pilot architecture project has defined an updated standard approach for controlling the automated test systems used to perform final quality assurance. The Chief Engineer, sponsor of the activity, and the Architecture Board have approved the plan for immediate implementation at each plant. Architecture Contracts have been developed that detail the work needed to implement and deploy the new automated test system controller for each location. The Chief Engineer has expressed concern that a uniform process be employed at each location to ensure consistency and a low blade failure rate. You have been asked to recommend the best approach to address the Chief Engineer's concern. Based on the TOGAF Standard, Version 9.2, which of the following is the best answer?**A.** You review the applicable Architecture Contract for each location, ensuring that it addresses the project objectives, effectiveness metrics, acceptance criteria, and risk management. In cases where the contract is issued to an external party, you ensure that it is a legally enforceable contract. You schedule compliance reviews at key points in the implementation process to ensure that the work is proceeding in accordance with the Architecture Board reviews all deviations from the Architecture Contract, and considers whether or not to grant a dispensation to allow the implementation organization to customize the process to meet their local needs.**B.** You create an Architecture Contract to manage and govern the implementation and migration process. If the contract is issued to an external party, you ensure that it is a fully enforceable legal contract. For internal development projects, you decide it is adequate to utilize a memorandum of understanding between the Architecture Board and the implementation organization. You recommend that if a deviation from the Architecture Contract is detected, the Architecture Board grant a dispensation to allow the implementation organization the ability to customize the process to meet their local needs.**C.** You create an Architecture Contract to manage and govern implementation and migration

process at each location. For internal development projects, you issue a memorandum of understanding between the Architecture Board and the implementation organization. For contracts issued to an external party, you ensure that it is a fully enforceable legal contract. You ensure that the Architecture Board reviews all deviations from the Architecture Contract, and considers whether or not to grant a dispensation to allow the implementation organization to customize the process to meet their local needs. **D.** You use the Architecture Contracts to manage the architecture governance processes for the project across the locations. You deploy monitoring tools to assess the performance of each completed steam turbine at each location and develop change requirements if necessary. You recommend that if a deviation from the contract is detected the Architecture Board should modify the Architecture Contract to allow the implementation organization the ability to customize the process to meet their local needs. As a result, you then issue a new Request for Architecture Work to implement the modified Architecture Definition. **Answer: A**
