NEW QUESTION: 1 You run the command `dlstat show-link -r`. Select the two correct statements regarding the information displayed in the INTRS column. **A.** A number equal to the number of transmitted Ethernet frames is listed for physical links. **B.** No value is listed for virtual network interfaces. **C.** A value of 0 is listed for virtual interfaces and ether stubs. **D.** The number of packets that were interrupted by a collision is listed, which may indicate hardware problems. **E.** The number of Interrupts is listed, which indicates network efficiency. **Answer: D, E** **Explanation:** In this output, the statistics for interrupt (INTRS) are significant. Low interrupt numbers indicate greater efficiency in performance. If the interrupt numbers are high, then you might need to add more resources to the specific link. Example:

```

NEW QUESTION: 4Your network contains an Active Directory domain named contoso.com. The domain contains a file server named Server1 that runs Windows Server 2012 R2.You view the effective policy settings of Server1 as shown in the exhibit. (Click the Exhibit button.)You need to ensure that an entry is added to the event log whenever a local user account is created or deleted on Server1.What should you do?**A.** In Servers GPO, modify the Audit Policy settings.**B.** On Server1, attach a task to the security log.**C.** On Server1, attach a task to the system log.**D.** In Servers GPO, modify the Advanced Audit Configuration settings.**Answer: D****Explanation:** Explanation/Reference:Explanation:When you use Advanced Audit Policy Configuration settings, you need to confirm that these settings are not overwritten by basic audit policy settings. The following procedure shows how to prevent conflicts by blocking the application of any basic audit policy settings.Enabling Advanced Audit Policy ConfigurationBasic and advanced audit policy configurations should not be mixed. As such, it's best practice to enable Audit: Force audit policy subcategory settings (Windows Vista or later) to override audit policy category settings in Group Policy to make sure that basic auditing is disabled. The setting can be found under Computer ConfigurationPoliciesSecurity SettingsLocal PoliciesSecurity Options, and sets the SCENoApplyLegacyAuditPolicy registry key to prevent basic auditing being applied using Group Policy and the Local Security Policy MMC snap-in.In Windows 7 and Windows Server 2008 R2, the number of audit settings for which success and failure can be tracked has increased to 53. Previously, there were nine basic auditing settings under Computer ConfigurationPoliciesWindows SettingsSecurity SettingsLocal PoliciesAudit Policy. These 53 new settings allow you to select only the behaviors that you want to monitor and exclude audit results for behaviors that are of little or no concern to you, or behaviors that create an excessive number of log entries. In addition, because Windows 7 and Windows Server 2008 R2 security audit policy can be applied by using domain Group Policy, audit policy settings can be modified, tested, and deployed to selected users and groups with relative simplicity. Audit Policy settingsAny changes to user account and resource permissions.Any failed attempts for user logon.Any failed attempts for resource access.Any modification to the system files. Advanced Audit Configuration SettingsAudit compliance with important business-related and security-related rules by tracking precisely defined activities, such as:A group administrator has modified settings or data on servers that contain finance information.An employee within a defined group has accessed an important file.The correct system access control list (SACL) is applied to every file and folder or registry key on a computer or file share as a verifiable safeguard against undetected access.In Servers GPO, modify the Audit Policy settings - enabling audit account management setting will generate events about account creation, deletion and so on.Advanced Audit Configuration SettingsAdvanced Audit Configuration Settings ->Audit Policy-> Account Management -> Audit User Account ManagementIn Servers GPO, modify the Audit Policy settings - enabling audit account management setting will generate events about account creation, deletion and so on.Reference:
