Someone have a preference for learning tools in paper version (CRT-402 pass-sure guide), which allow them to make some timely notes in the process, What matters most is how you learn and what kinds of learning materials you use.

NEW QUESTION: 1Penetration testing will typically include**A.** Review of Public Key Infrastructure (PKI) digital certificate, and encryption.**B.** Generally accepted auditing practices.**C.** Computer Emergency Response Team (CERT) procedures.**D.** Social engineering, configuration review, and vulnerability assessment.**Answer: D**

NEW QUESTION: 2You are working on a campus design for a customer who has acquired a building across the street from the main facility. The recently acquired building was built in 1979 and has not been updated to support the demands of current network technologies. The building must support high-speed network connections for all users working at the location. Which two elements would you consider when analyzing connectivity and throughput requirements for this new location? (Choose two.)**A.** the data received from a traffic analysis**B.** the type of business the customer is in**C.** the hierarchical modules used within each group at the new location**D.** the condition of the physical media at the new location**Answer: A,D**

NEW QUESTION: 3A client's membranes have just ruptured spontaneously. Which of the following nursing actions should take priority?**A.** Assess quantity of fluid.**B.** Assess color and odor of fluid.**C.** Assess fetal heart rate (FHR).**D.** Document on fetal monitor strip and chart.**Answer: C****Explanation:**(A) Assessing the quantity of amniotic fluid is important as an indication of maternal fetal well-being, but it does not take priority over assessment of FHR. (B) Greenish-brown discoloration of amniotic fluid indicates presence of meconium. Foul odor may indicate presence of infection. Both of these are important assessment data, but they do not take priority over possible lifethreatening compression of the umbilical cord. (C) Documentation is important, but it does not take priority over the possible life-threatening compression of the umbilical cord. (D) If changes in the FHR are noted, the nurse should check for umbilical cord prolapse. This intervention has priority over the other actions. The danger of a prolapsed cord is increased once membranes have ruptured, especially if the presenting part of the fetus does not fit firmly against the cervix.

NEW QUESTION: 4Where does the SNMP agent reside?**A.** On the network monitoring station**B.** On each cluster node**C.** On the management server**D.** On one cluster node, until that node fails**Answer: B**
