Customer videos are downloaded from the web app by using the following example URL: `http://www.contoso.com/content.mp4?quality=1` All media content must expire from the cache after one hour. Customer videos with varying quality must be delivered to the closest regional point of presence (POP) node. You need to configure Azure CDN caching rules. Which options should you use? To answer, select the appropriate options in the answer area. **NOTE:** Each correct selection is worth one point. **Answer:** Explanation: Explanation Box 1: Override Override: Ignore origin-provided cache duration; use the provided cache duration instead. This will not override cache-control: no-cache. Set if missing: Honor origin-provided cache-directive headers, if they exist; otherwise, use the provided cache duration. Incorrect: Bypass cache: Do not cache and ignore origin-provided cache-directive headers. Box 2: 1 hour All media content must expire from the cache after one hour. Box 3: Cache every unique URL Cache every unique URL: In this mode, each request with a unique URL, including the query string, is treated as a unique asset with its own cache. For example, the response from the origin server for a request for example.ashx?q=test1 is cached at the POP node and returned for subsequent caches with the same query string. A request for example.ashx?q=test2 is cached as a separate asset with its own time-to-live setting. Reference: <https://docs.microsoft.com/en-us/azure/cdn/cdn-query-string>
