NEW QUESTION: 1Which of the following is an estimating technique that uses the values of parameters from previous similar projects for estimating the same parameter or measure for a current project?**A.** Three-point estimating**B.** Parametric estimating**C.** Analogous estimating**D.** Reserve analysis**Answer: C****Explanation:**Explanation/Reference:Explanation:7.2.2.2 Analogous EstimatingAnalogous cost estimating uses the values such as scope, cost, budget, and duration or measures of scale such as size, weight, and complexity from a previous, similar project as the basis for estimating the same parameter or measurement for a current project. When estimating costs, this technique relies on the actual cost of previous, similar projects as the basis for estimating the cost of the current project. It is a gross value estimating approach, sometimes adjusted for known differences in project complexity.Analogous cost estimating is frequently used to estimate a value when there is a limited amount of detailed information

about the project, for example, in the early phases of a project. Analogous cost estimating uses historical information and expert judgment
