Looking for AWS-Solutions-Architect-Associate Estruturit dumps, Besides, there are free demos for your careful consideration to satisfy individual needs on our AWS-Solutions-Architect-Associate learning prep.

If you can open the browser you can learn.

**NEW QUESTION: 1A. SNMPC. TFTPC. RIPD. FTPE. DNS****Answer: D**Explanation:ExplanationTCP is an example of a connection-oriented protocol. It requires a logical connection to be established between the two processes before data is exchanged. The connection must be maintained during the entire time that communication is taking place, then released afterwards. The process is much like a telephone call, where a virtual circuit is established--the caller must know the person's telephone number and the phone must be answered--before the message can be delivered.TCP/IP is also a connection-oriented transport with orderly release. With orderly release, any data remaining in the buffer is sent before the connection is terminated. The release is accomplished in a three-way handshake between client and server processes. The connection-oriented protocols in the OSI protocol suite, on the other hand, do not support orderly release. Applications perform any handshake necessary for ensuring orderly release.Examples of services that use connection-oriented transport services are telnet, rlogin, and ftp.

**NEW QUESTION: 2SCP (서비스 제어 정책)가 다음 중 어떤 권한을 관리합니까?A. 가용 영역B. 에지 위치C. AWS 조직D. AWS 리전****Answer: A**

**NEW QUESTION: 3**About HostAgent scheme, which of the following is wrong :**A.** HostAgent support oracle etc main database applications**B.** only support host application of Windows and Linux system**C.** HostAgent support graphical interface unified management and configuration **D.** HostAgent interface management support centralized management application servers  
**Answer: B**
