NEW QUESTION: 1 This question requires that you evaluate the underlined text to determine if it is correct. You install a new Windows Server 2008 R2 server for your school athletic department. The installation completes without errors. However, the new server is unable to communicate with the network. After checking cable connections and network configuration, you find that no network connections are listed in the Control Panel/Network Connections applet. You should use "Device Manager" to investigate a potential problem with the network adapter driver. Select the correct answer if the underlined text does not make the statement correct. Select "No change is needed" if the underlined text makes the statement correct. **A.** No change is needed **B.** Control Panel/Network Connections **C.** Network and Sharing Center **D.** Server Manager/WMI Control **Answer: A** Explanation: Explanation/Reference: The Device Manager is a Control Panel applet in Microsoft Windows operating systems. It allows users to view and control the hardware attached to the computer. When a piece of hardware is not working, the offending hardware is highlighted for the user to deal with. Reference: http://en.wikipedia.org/wiki/Device_Manager

NEW QUESTION: 2 The CATDB12c database contains an Oracle Database 12c catalog schema owned by the RC12cc user. The CATDB11 database contains an Oracle Database 11g catalog schema owned by the RC11 user. A database with DBID=1423241 is registered in the CATDB11 catalog. Both the recovery database are open.
