**NEW QUESTION: 1** Consider the following commands: What is displayed when this sequence of commands is executed using the bash shell?  
**A.** bash: syntax error near unexpected token '&&'  
**B.** cat: cannot open file1 Hello, World  
**C.** cat: cannot open file1 Hello, world  
**D.** Hello, world  
**E.** cat: cannot open file1  
**Answer: E**  
**Explanation:** Explanation/Reference: Explanation: First line (rm file1) deletes/removes file1. Second line captures the text into file2. The first part of line 3 (cat file1) fails as the file1 does not exist. The && (AND) operator will ensure that the third line fails. The result of line 3 will be the result of first part of line 3 (cat file1).  
**Note:** cat - concatenate files and print on the standard output  
**Note #1:** A list is a sequence of one or more pipelines separated by one of the operators ';', '&', '&&', or '|', and optionally terminated by one of ';', '&', or a newline. Of these list operators, '&&' and '|' have equal precedence, followed by ';' and '&', which have equal precedence. AND and OR lists are sequences of one or more pipelines separated by the control operators '&&' and '|', respectively. AND and OR lists are executed with left associativity. An AND list has the form command1 && command2 command2 is executed if, and only if, command1 returns an exit status of zero. An OR list has the form command1 | command2 command2 is executed if, and only if, command1 returns a non-zero exit status. The return status of AND and OR lists is the exit status of the last command executed in the list.  
**Note #2 (on exit status):** Zero means command executed successfully, if exit status returns non-zero value then your command failed to execute.
