NEW QUESTION: 2HOTSPOT You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment. You have two domain users named User1 and User2. The users will perform the following administrative tasks: * User1 will create device collections. * User2 will create task sequences. You need to identify to which security role each user must be added. The solution must use the principle of least privilege. Which security roles should you identify? To answer, select the appropriate options in the answer area. **Answer:** Explanation: Explanation: Box 1: Asset Manager. Grants permissions to manage the Asset Intelligence Synchronization Point, AssetIntelligence reporting classes, software inventory, hardware inventory, and metering rules. This role also has the permission to create device collections. Operations Manager can also create task sequences but Asset Manager has least privilege. Box 2: Operating System Deployment Manager Grants permissions to create operating system images and deploy them to computers. Administrative users who are associated with this role can manage operating system installation packages and images, task sequences, drivers, boot images, and state migration settings.
