The trk1 link aggregation group has these settings: Interfaces = 48 and 49 Untagged VLAN = 1 Tagged VLANs = 2-4 How should the administrator complete the setup? **A.** Enable link-keepalive on interface 48, specifying the VLAN as 1. **B.** Enable link-keepalive on trk1 **C.** Enable link-keepalive on both interfaces in the trunk (48 and 49). **D.** On both interfaces in the trunk (48 and 49), enable link-keepalive, specifying the VLAN as 1.

Answer: D Explanation: Explanation/Reference: * The following commands allow you to configure UDLD via the CLI. Syntax: [no] interface <port-list> link-keepalive Enables UDLD on a port or range of ports * Ports enabled for UDLD exchange health-check packets once every five seconds (the link-keepalive interval). If a port does not receive a health-check packet from the port at the other end of the link within the keepalive interval, the port waits for four more intervals. If the port still does not receive a healthcheck packet after waiting for five intervals, the port concludes that the link has failed and blocks the UDLD-enabled port.
