**NEW QUESTION: 1** Refer to the exhibit. Which feature can R1 use to fail over from R2 to R3 if the address for R2 becomes unavailable? **A.** HSRP **B.** object tracking **C.** GLBP **D.** LACP **Answer: B**  
Explanation: The object tracking feature allows you to create a tracked object that multiple clients can use to modify the client behavior when a tracked object changes. Several clients register their interest with the tracking process, track the same object, and take different actions when the object state changes. Clients include the following features: Embedded Event Manager (EEM) Gateway Load Balancing Protocol (GLBP) Hot Standby Redundancy Protocol (HSRP) Virtual port channel (vPC) Virtual Router Redundancy Protocol (VRRP) The object tracking monitors the status of the tracked objects and communicates any changes made to interested clients. Each tracked object is identified by a unique number that clients can use to configure the action to take when a tracked object changes state. Reference:
