It is only available as an add-on to our main Question [C1000-182 Valid Mock Exam](#) & Answer product, Can you imagine that you don't have to stay up late to learn and get your boss's favor?

NEW QUESTION: 1After connecting a workstation directly to a small business firewall, a network administrator is trying to manage it via HTTPS without losing its stored configuration. The only two pieces of information that the network administrator knows about the firewall are the management interface MAC address, which is 01:4a:d1:fa:b1:0e, and the administrator's password. Which of the following will allow the administrator to log onto the firewall via HTTPS if the management's IP address is unknown and the administrator's workstation IP address is 192.168.0.10/23?**A.** Use a crossover cable to connect to the console port and reconfigure the firewall management IP to 192.168.0.1**B.** Use an SNMP tool to query the firewall properties and determine the correct management IP address**C.** Use the reset button on the back of the firewall to restore it to its factory default, and then log onto**D.** Run the following command on the administrator's workstation: arp -s 192.168.1.200 01:4a:d1:fa:b1:0e**Answer: D****Explanation:** Address Resolution Protocol (ARP) is used to resolve IP addresses to MAC addresses. The arp -s command adds a static permanent address to the ARP cache. This will allow the administrator to access the firewall.

NEW QUESTION: 2Which physical connection rule must you follow when the Cisco ACI fabric is wired?**A.** A spine can connect to the access port of a leaf.**B.** A spine can connect to a leaf.**C.** A spine can connect to a spine.**D.** A leaf can connect to a leaf.**Answer: B**

NEW QUESTION: 3Your network contains an Active Directory forest named contoso.com. The forest contains two domains named contoso.com and child.contoso.com and two sites named Site1 and Site2. The domains and the sites are configured as shown in following table. When the link between Site1 and Site2 fails, users fail to log on to Site2. You need to identify what prevents the users in Site2 from logging on to the child.contoso.com domain. What should you identify?**A.** The placement of the global catalog server**B.** The placement of the domain naming master**C.** The placement of the infrastructure master**D.** The placement of the PDC emulator**Answer: D****Explanation:**The exhibit shows that Site2 does not have a PDC emulator. This is important because of the close interaction between the RID operations master role and the PDC emulator role. The PDC emulator processes password changes from earlier-version clients and other domain controllers on a best-effort basis; handles password authentication requests involving passwords that have recently changed and not yet been replicated throughout the domain; and, by default, synchronizes time. If this domain controller cannot connect to the PDC emulator, this domain controller cannot process authentication requests, it may not be able to synchronize time, and password updates cannot be replicated to it. The PDC emulator master processes password changes from client computers and replicates these updates to all

domain controllers throughout the domain. At any time, there can be only one domain controller acting as the PDC emulator master in each domain in the forest.

NEW QUESTION: 4 Which of the following statements is CORRECT about the VoIP features?
A. The transmission media is the IP network. The switching mode is packet switching. The VoIP features high bandwidth utilization.
B. The transmission media is the IP network. The switching mode is packet switching. The VoIP features low bandwidth utilization.
C. The transmission media is PSTN. The switching mode is circuit switching. The VoIP features low bandwidth utilization.
D. The transmission media is PSTN. The switching mode is circuit switching. The VoIP features high bandwidth utilization.
Answer: A
