**NEW QUESTION: 1**DRAG DROP**Answer:** Explanation:

**NEW QUESTION: 2**When configuring a Cisco Catalyst switch to accommodate an IP phone with an attached PC, it is desired that the trust boundary be set between the IP phone and the switch. Which two commands on the switch are recommended to set the trust boundary as described? (Choose two.)**A.** mls qos trust device cisco-phone**B.** no mls qos trust dscp**C.** mls qos cos 5**D.** mls qos trust extend [cos value]**E.** mls qos trust cos**F.** switchport priority extend trust  
**Answer: A, E****Explanation:**mls qos trust [ cos ] : By default, the port is not trusted. All traffic is sent through one egress queue. Use the cos keyword to classify ingress packets with the packet CoS values. The egress queue assigned to the packet is based on the packet CoS value. When this keyword is entered, the traffic is sent through the four QoS queues. Normally, the QoS information from a PC connected to an IP Phone should not be trusted. This is because the PC's applications might try to spoof CoS or Differentiated Services Code Point (DSCP) settings to gain premium network service. In this case, use the cos keyword so that the CoS bits are overwritten to value by the IP Phone as packets are forwarded to the switch. If CoS values from the PC cannot be trusted, they should be overwritten to a value of 0.

**NEW QUESTION: 3**Module A and Module B share the same resources deployed as a shared library on the server. Module A has to be updated resulting in changes to some of the shared resources. Which one of the following statements is correct with respect to the dependency of the two modules on the shared resources?**A.** Module B needs to be rebuilt, tested and updated.**B.** Module B will update itself automatically as Module A is updated.**C.** The shared library remains unaffected by the update to Module**D.** Module B will throw an error saying the shared library is out of date.**Answer: A**

**NEW QUESTION: 4**What level of logging is enabled on a Router where the following logs are seen?  
%LINK-3-UPDOWN: Interface FastEthernet0/1, changed state to up  
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/1, changed state to up**A.** notifications**B.** alerts**C.** critical**D.** errors**Answer: A****Explanation:**ExplanationCisco routers,

switches, PIX and ASA firewalls prioritize log messages into 8 levels (0-7), as shown below:

Level	Name	Description
0	Emergencies	System is unusable
1	Alerts	Immediate action needed
2	Critical	Critical conditions
3	Errors	Error conditions
4	Warnings	Warning conditions
5	Notifications	Informational messages
6	Informational	Normal but significant conditions
7	Debugging	Debugging messages

When you enable logging for a specific level, all logs of that severity and greater (numerically less) will be logged. In this case we can see that logging level of 3 (as seen by the 3 in "LINK-3-UPDOWN") and level 5 (as seen by the 5 in "LINEPROTO-5-UPDOWN") are shown, which means that logging level 5 must have been configured. As shown by the table, logging level 5 is Notifications.
