NEW QUESTION: 3What are three features of the IPv6 protocol?(Choose three.)**A.** optional IPsec**B.** plug-and-play**C.** complicated header**D.** autoconfiguration**E.** no broadcasts**F.** checksums**Answer: B,D,E**Explanation:An important feature of IPv6 is that it allows plug and play option to the network devices by allowing them to configure themselves independently. It is possible to plug a node into an IPv6 network without requiring any human intervention. This feature was critical to allow network connectivity to an increasing number of mobile devices. This is accomplished by autoconfiguration.IPv6 does not implement traditional IP broadcast, i.e. the transmission of a packet to all hosts on the attached link using a special broadcast address, and therefore does not define broadcast addresses. In IPv6, the same result can be achieved by sending a packet to the link-local all nodes multicast group at address ff02::1, which is analogous to IPv4 multicast to address 224.0.0.1.
