NEW QUESTION: 1A network administrator calculated the power budget on a specific switch with redundant power components. The device provides enough power to power all the attached devices, but there is no redundancy for the PoE power delivery. The administrator needs to mitigate the impact of a PoE power source component failure and ensure that critical devices stay powered. How would the administrator achieve this?
A. Configure the PoE priority settings for ports.
B. Configure PoE values by using LLDP.
C. Change the port PoE mode setting from PoE to PoE+.
D. Change the port PoE mode setting from PoE+ to PoE
Answer: A

NEW QUESTION: 2A user is trying to create a list of IAM users with the AWS console. When the IAM users are created which of the below mentioned credentials will be enabled by default for the user?
A. Nothing. Everything is disabled by default
B. IAM access key and secret access key
C. IAM X.509 certificates
D. IAM passwords
Answer: A
Explanation: Explanation/Reference:
Explanation: Newly created IAM users have no password and no access key (access key ID and secret access key). If the user needs to administer your AWS resources using the AWS Management Console, you can create a password for the user. If the user needs to interact with AWS programmatically (using the command line interface (CLI), the AWS SDK, or service-specific APIs), you can create an access key for that user. The credentials you create for users are what they use to uniquely identify themselves to AWS.
