NEW QUESTION: 1 You are required to migrate your 11.2.0.3 database as a pluggable database (PDB) to a multitenant container database (CDB). The following are the possible steps to accomplish this task: 1. Place all the user-defined tablespaces in read-only mode on the source database. 2. Upgrade the source database to a 12c version. 3. Create a new PDB in the target container database. 4. Perform a full transportable export on the source database with the VERSION parameter set to 12 using the expdp utility. 5. Copy the associated data files and export the dump file to the desired location in the target database. 6. Invoke the Data Pump import utility on the new PDB database as a user with the DATAPUMP_IMP_FULL_DATABASE role and specify the full transportable import options. 7. Synchronize the PDB on the target container database by using the DBMS_PDS.SYNC_ODB function. Identify the correct order of the required steps. **A.** 1, 5, 6, 4, 3, 2 **B.** 1, 4, 3, 5, 6, 7 **C.** 2, 1, 3, 4, 5, 6 **D.** 2, 1, 3, 4, 5, 6, 7 **E.** 1, 3, 4, 5, 6, 7 **Answer: C**
Explanation: Step 0: (2) Upgrade the source database to 12c version. Note: Full Transportable Export/Import Support for Pluggable Databases Full transportable export/import was designed with pluggable databases as a migration destination. You can use full transportable export/import to migrate from a non-CDB database into a PDB, from one PDB to another PDB, or from a PDB to a non-CDB. Pluggable databases act exactly like nonCDBs when importing and exporting both data and metadata. The steps for migrating from a non-CDB into a pluggable database are as follows: Step 1. (1) Set the user and application tablespaces in the source database to be READ ONLY Step 2. (3) Create a new PDB in the destination CDB using the create pluggable database command Step 3. (5) Copy the tablespace data files to the destination Step 4. (6) Using an account that has the DATAPUMP_IMP_FULL_DATABASE privilege, either (6) Export from the source database using expdp with the FULL=Y TRANSPORTABLE=ALWAYS options, and import into the target database using impdp, or Import over a database link from the source to the target using impdp Step 5. Perform post-migration validation or testing according your normal practice
