NEW QUESTION: 2Which three are needed to run VRF lite for IPv6 on a router? (Choose three.)**A.** VRF definition for IPv6**B.** MP BGP for IPv6**C.** LDP**D.** VRF-enabled routing protocol**E.** VRF-enabled interface**Answer: A,D,E****Explanation:**The word VRF stands for Virtual Routing and Forwarding, this feature is used to create multiple instances of the routing table on the same routing device. VRFs are usually used in conjunction with MPLS VPN to separate the traffic of multiple MPLS VPN customers. VRF Lite feature is part of Cisco's network virtualization portfolio.VRF Lite means VRF without the need to run MPLS in the network. VRF Lite allows the network administrator to create multiple routing instances on the same routing device within the enterprise. VRF Lite can be useful when you need to isolate traffic between two networks sharing the same routing platform or if you have multiple networks with overlapping addresses sharing the same physical network. Multiple instances of routing protocols can be used for different VRFs on the same device to exchange routes dynamically with a direct connected device VRF Lite Configuration: R2 is connected via Ethernet to R5. Two VRFs (VRF-LITE-A & B) are configured to demonstrate L3 traffic isolation. I am using static routes for this example but dynamic routing protocols can be used. R2 Configuration:
